

Real case: five beat decoders diverge on the same activation

GTZAN - Pop 00053 | clean held-out GTZAN test piece | Beat This final0 | 30.02 s

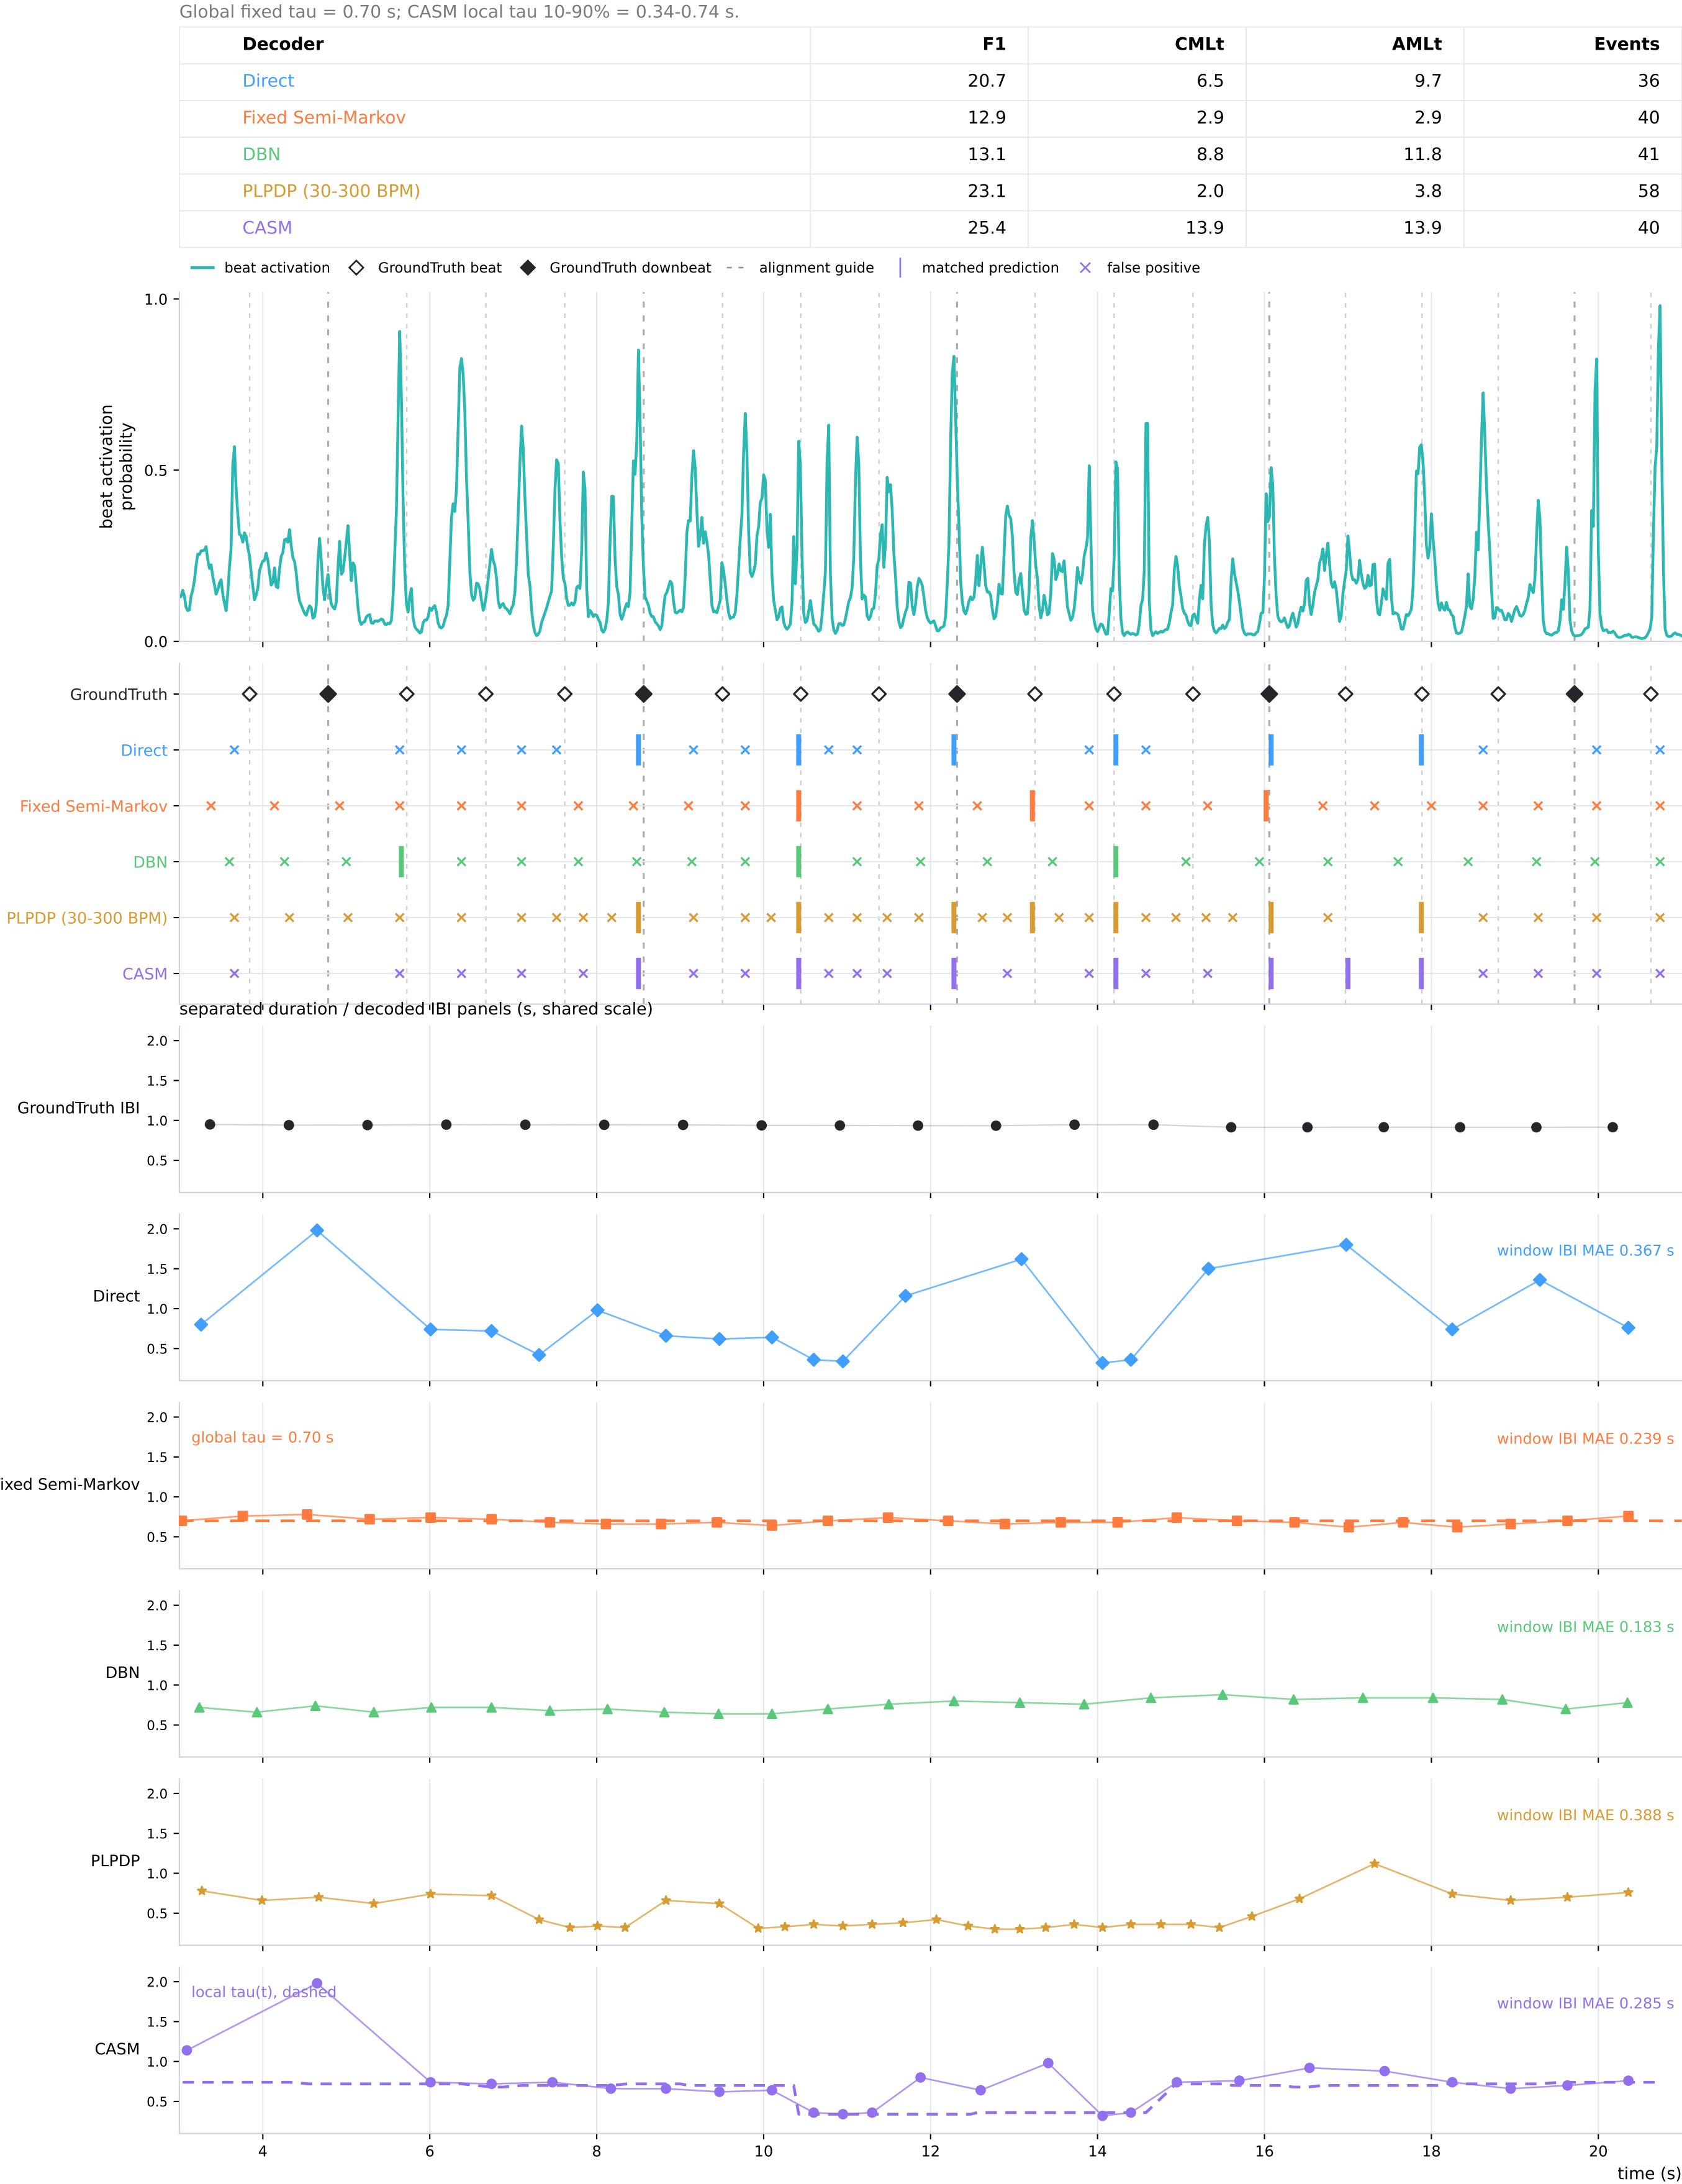

Illustration-only selection. Fixed Semi-Markov is a global-period mechanism replay. DBN uses the matched benchmark setting: min/max BPM 30/300, transition lambda 100, observation lambda 16, threshold 0.05. IBI MAE is an explanatory diagnostic, not a benchmark metric.
