

Real case: five beat decoders diverge on the same activation

SMC 117 | held-out test piece | Beat This fold 5 | 40.02 s

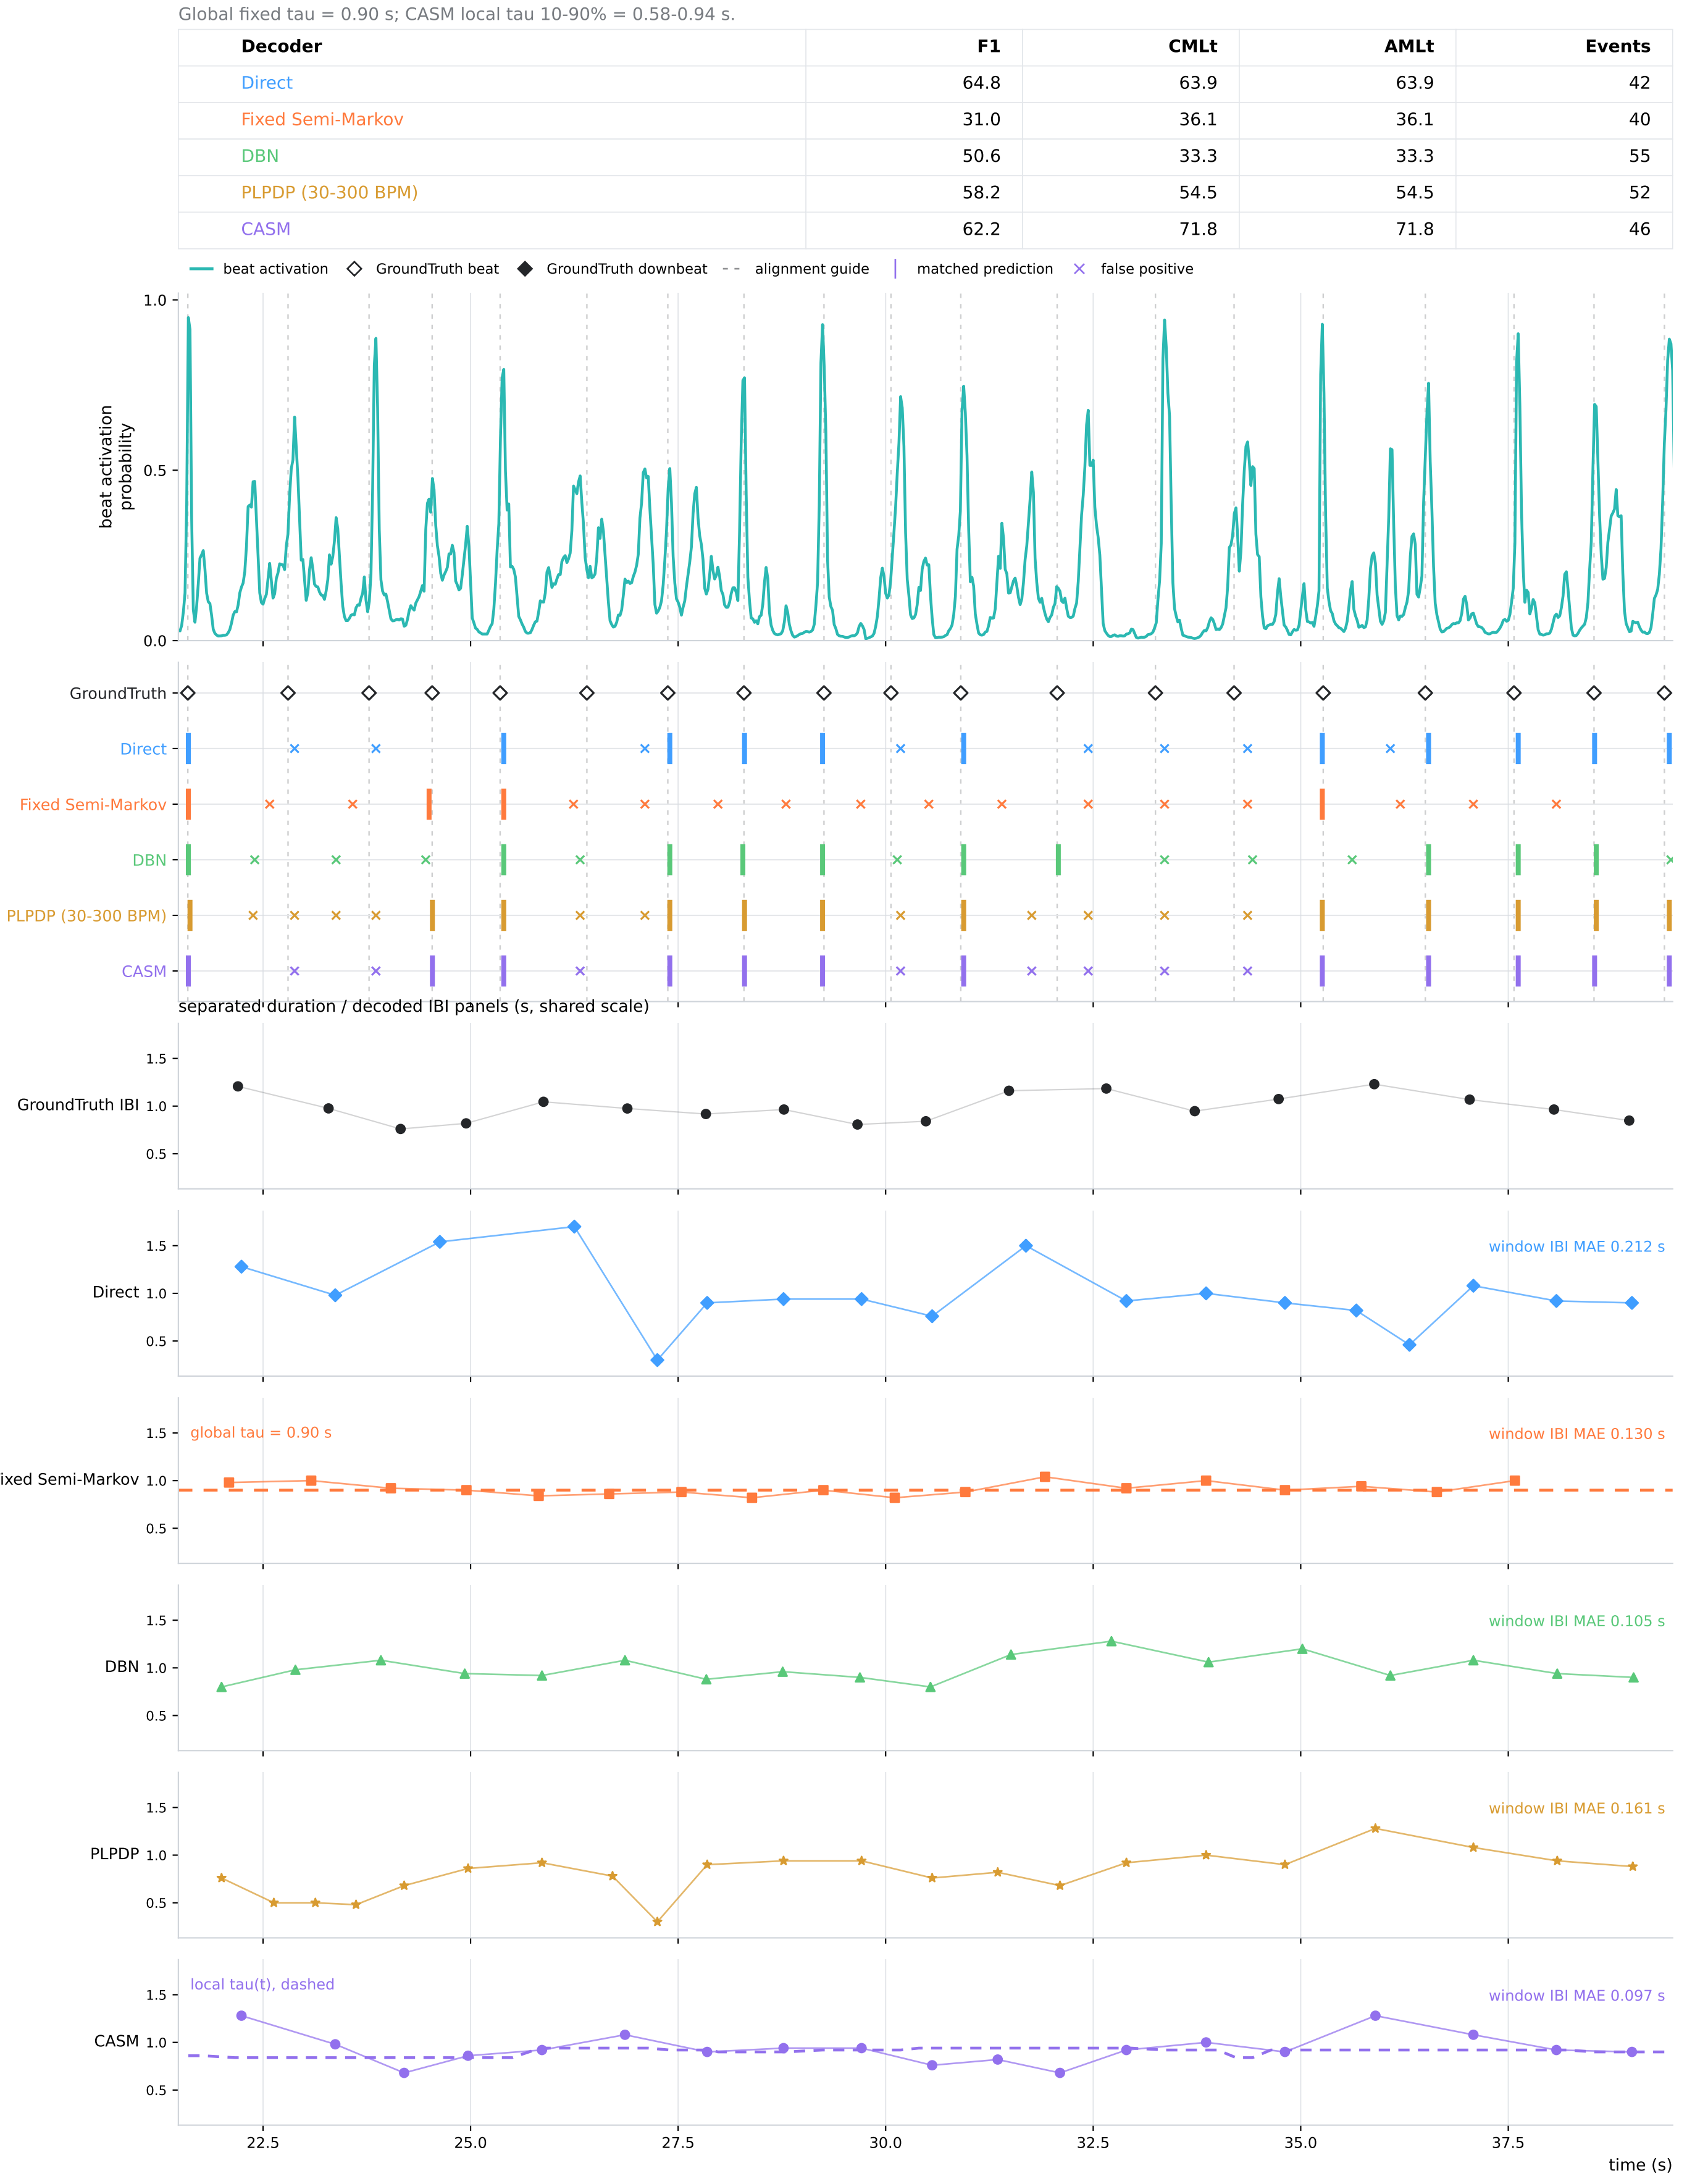

Illustration-only selection. Fixed Semi-Markov is a global-period mechanism replay. DBN uses the shared illustration setting: min/max BPM 35/160, transition lambda 50, observation lambda 8, threshold 0.03. IBI MAE is an explanatory diagnostic, not a benchmark metric.
